

Issue # 16

Writing a dynamic Encyclopedia of Energy Efficiency in India.

Present experience with technical contributions to the www.energymanagertraining.com webpage is very good. Congratulations to all contributors. Nevertheless one year experience has shown a few shortcomings requiring attention.

- (i) Giving a prize does not mean everything was correct in a paper;
- (ii) There is no follow up in improving the paper;
- (iii) There are too few involved in editing and making a paper perfect;
- (iv) There is no proper library structure to relate topics and link them;
- (v) We may be biased by selecting a paper;

It was decided to integrate all contributions into www.wikipedia.org and start writing the Indian Encyclopedia of Energy Efficiency. Have a look at www.wikipedia.org to appreciate the concept.

Everybody is invited to edit and discuss under www.wikipedia.org by adhering to the guidelines of wikipedia.

However the first draft of a new paper to be posted under wikipedia will be submitted to IGEN and properly formatted by us. This will save time for writers and improve quality. Mr. Srikanth (srikanth@energymanagertraining.com) will be the manager for the project that will be running. Professional fees to those who write a chapter or note and as well for those who edit and improve the paper of the first author will be paid. Paper editor and “optimizer” will earn points towards their contribution and being reimbursed twice a year.

Hopefully we will get hundreds of writers and editors.

In order to start we post the two papers from Quiz # 07 topic 1, from Mr. Harsh Malhotra and Mr. Manjeet Singh and invite the rest to edit and optimize under www.wikipedia.org.

The URL's of the above papers are as follows:

Harsh Malhotra:

http://en.wikipedia.org/wiki/Calorific_Value_of_Coal

Manjeet Singh:

http://en.wikipedia.org/wiki/Indian_coal
