Subject: Comments regarding Technical Query on Motor-Alternator arrangement

Hi,

I don't understand why do you want to connect the motor to the alternator to produce electricity as the alternator will produce the same power ( even less) than what it draws the mechanical power from Motor & subsequently from Electrical grid. Rather you may seek some other mechanical power generator like steam turbine, Gas turbine, Hydel Turbine or Diesel engine. These power contravences produce mechanical power which may be coupled to the Alternator ( which is available to you) with suitable Gearbox arrangement.

Please write back in case you need further assistance.

Thanks & Regards,
